S/K II Challenge Scope

S/K Challenge is an OSD effort to collaborate and reduce costs of equipment testing. The annual event allows groups to utilize Dugway Proving Ground, UT test facilities to demonstrate and collect data on their equipment and processes in a more economical environment. This effort helps support initial entry and cost prohibition that sometimes stalls new technologies.

S/K Challenge II provides the opportunity to demonstrate your chemical and biology equipment during a two week event. This year Dugway Proving Grounds will be incorporating outdoor chambers and field scenarios during the informal non-acquisition demonstration. We will be demonstrating outdoor chamber testing using the Joint Ambient Breeze Tunnel (JABT) and Active Standoff Chamber (ASC) providing customers with variety of chem & bio challenges. We will follow up the event with a field demonstration applying real world scenarios allowing customer to evaluate their equipment in a realistic environment. Customers will have the opportunity to meet with industry, international, and government organizations during the VIP Day and throughout the event.
